Professional Summary

Software Engineer with 1+ year of experience at Endava Solutions India Private Limited, specializing in Java, Spring Boot, React.js, microservices, Spring WebFlux, Apache Kafka, and PostgreSQL. Experienced in developing enterprise applications across backend and frontend layers, building reactive services, implementing event-driven communication, and working with scalable data-driven systems. Strong focus on clean, maintainable, and performance-conscious software development.

Technical Skills

Backend — Java, Spring Boot, Microservices, Spring WebFlux	Frontend — React.js, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, Bootstrap, Figma
Databases — SQL, MySQL, PostgreSQL	Messaging & Caching — Apache Kafka, Caffeine
Testing & Performance — JMeter, k6	Containers — Docker, Podman
Security & Encryption — Jasypt, Argon2	DSA — Data Structures & Algorithms

Professional Experience

Endava Solutions India Private Limited (*Software Engineer*) August 2025 - September 2026

EasyPay — Digital Payment Application

Java, Spring Boot, React.js, PostgreSQL, Apache Kafka, Spring WebFlux, Caffeine

- Developed a digital payment application supporting secure financial transactions and payment workflows.
- Implemented features including UPI integration, payment requests, scheduled payments, multiple-recipient payments, transaction history, and analytics.
- Developed reactive backend services using Spring WebFlux for non-blocking request processing and scalable payment workflows.
- Implemented event-driven communication using Apache Kafka and persistent data management using PostgreSQL.

Endava Assessment Portal — Assessment & Proctoring Platform

Java, Spring Boot, React.js, TypeScript, PostgreSQL, Apache Kafka, Caffeine, LLM Integration

- Developed a monitoring dashboard that polls backend services to provide near real-time assessment and proctoring information.
- Implemented live video monitoring and snapshot capture of proctoring events to support assessment monitoring.
- Integrated LLM-based functionality to generate coding questions and dynamically select questions within assessments.
- Implemented warning and cooldown logic to prevent repeated warnings for consecutive occurrences of the same proctoring event.
